On page 21, Equation 1.42 has been replaced with the following:

$$c_h' = \frac{3d_l \left( \frac{T_h}{Cd_l} - R_c \frac{d_l}{2} \right) + d_l^2 R_c}{\frac{6T_h}{Cd_l}}$$

Note that the value of  $R_c$  used in Eq. 1.42 is the Assumed  $R_c$  value calculated with Eq. 1.41.
